President/CEO

Miracle Hill Ministries

Sheltered Homelessness in the Upstate of South Carolina

Austin Barrett, PhD

*Data Analyst, United Housing Connections
serving the Upstate Continuum of Care*

Methodology

- *Multiple Data Extracts*
- *Deduplication*
- *Deidentification*
- *Merger with 2017 & 2018*
- *Analysis & Interpretation*
 - *Focused on trends – all four years analyzed*

Number of Sheltered Persons from 2017-2020

Remains high despite a decrease from 2019 to 2020

Persons Served by Year and Data Source

Potential Reasons for the Decrease

- 1. HMIS-affiliated shelters reduced bed inventory in 2020 (Miracle Hill did not)*
- 2. Fear of congregate settings led people to avoid seeking out shelter*
- 3. Additional federal funding was made available to stem the flow of persons into shelters*
- 4. Slightly longer lengths of stay in shelter, leading to lower turnover of available beds*

This annualized count is still nearly three to four times larger than the sheltered Point-in-Time Count

Point-in-Time vs. Annualized

Persons Served by County

Providers in Greenville County served around 2/3rds of all sheltered clients...

...in every year

Persons Served by County

Persons Served by Project Type

Persons Served
by Project Type

*A Large Majority
were Served in
Emergency Shelter*

Gender

Gender of Persons Served

Males accounted for nearly 2 out of 3 persons served and their proportion is growing...

Primary Race

Primary Race:

Largest Percentages White & Black/African American

Hispanic/ Latino Ethnicity

*A small
percentage
identified as
Hispanic/
Latino*

Hispanic/Latino

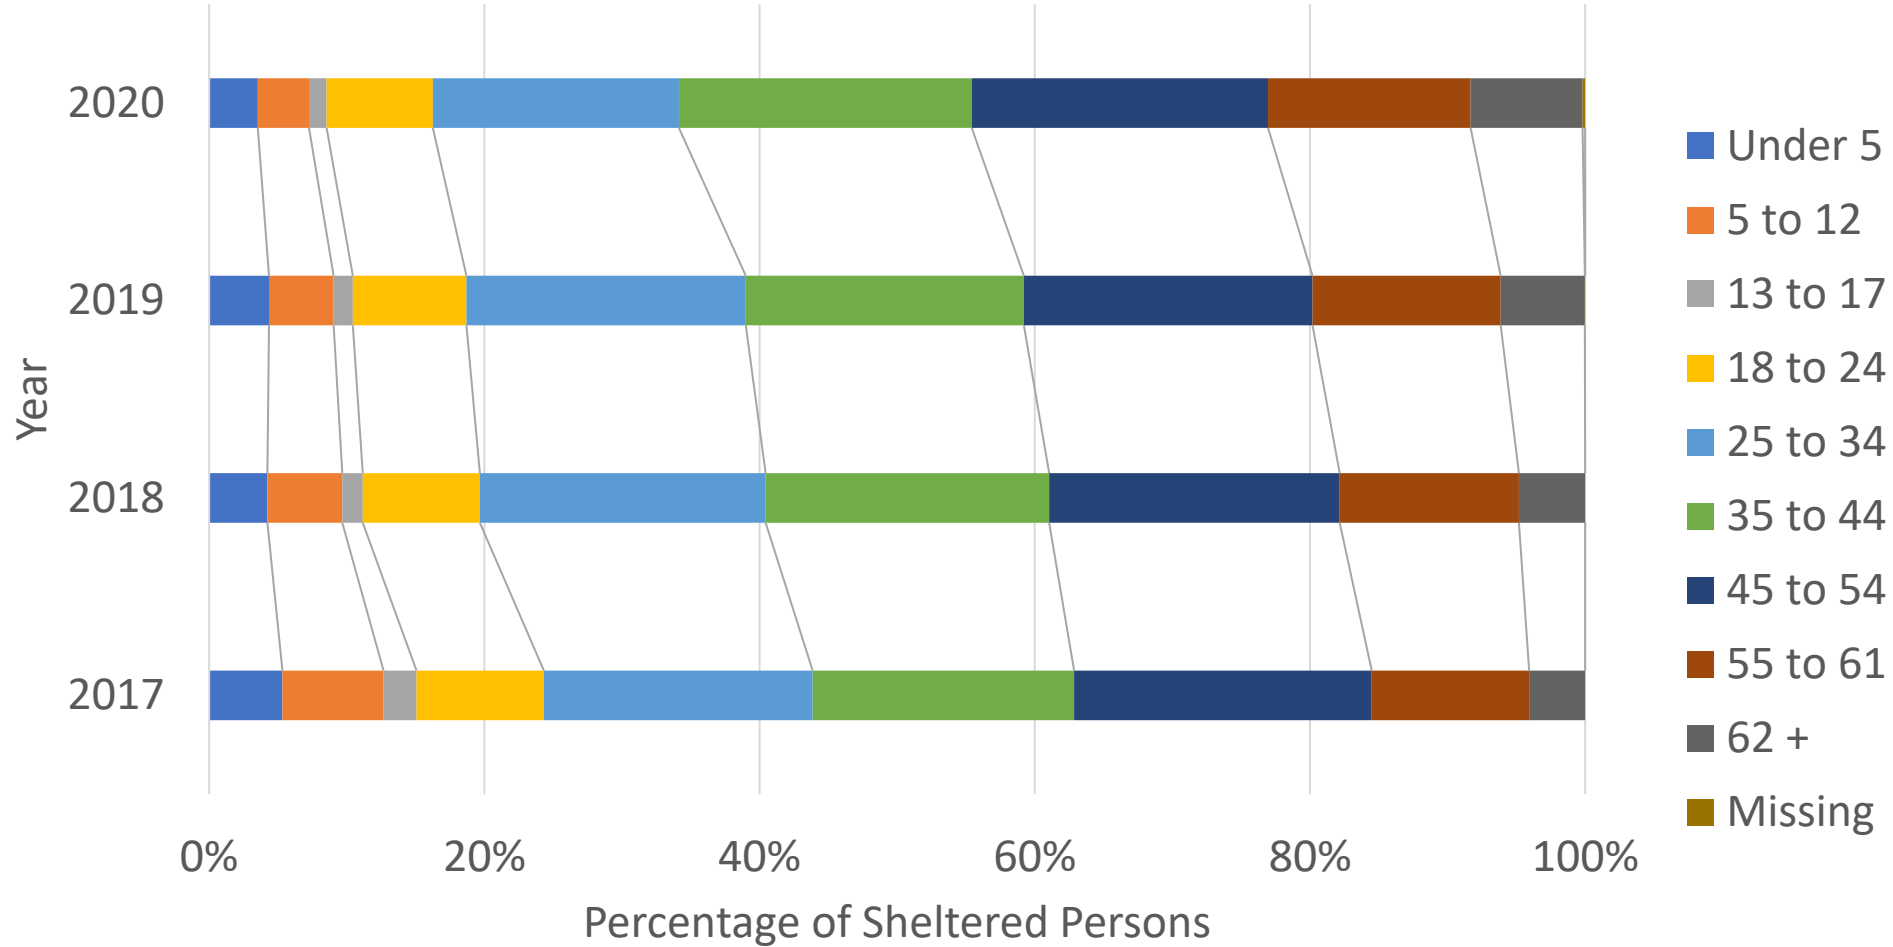

Average and Median Age at Shelter Entry

Age: Average & Median is Increasing Year-Over-Year

Age Groups

Age Groups:

Young Adults to Middle Age - Largest; Older Groups Increasing

Self-Reported Veterans Status

Between 6-9% of shelter clients reported they were Veterans

Increase in 2019/2020 is because of the addition of transitional housing beds for Veterans

Veterans Status

Residence before Shelter

The majority of persons entered from literal homeless situations, followed by non-homeless, then institutional settings

The percentage of persons entering from literal homelessness increased year-over-year

Residence Prior to Shelter

Residence before Shelter – Focus on Literal Homelessness

Residents increasingly entered shelter from places not meant for habitation

This percentage increased steadily across all four years

Type of Prior Homeless Situation

Exit Destinations

Residents exiting to “Unknown Destinations” continues to be challenging

When analyzing known exit destinations, residents tended to exit to positive, non-homeless, destinations by a large margin

Exit Destinations

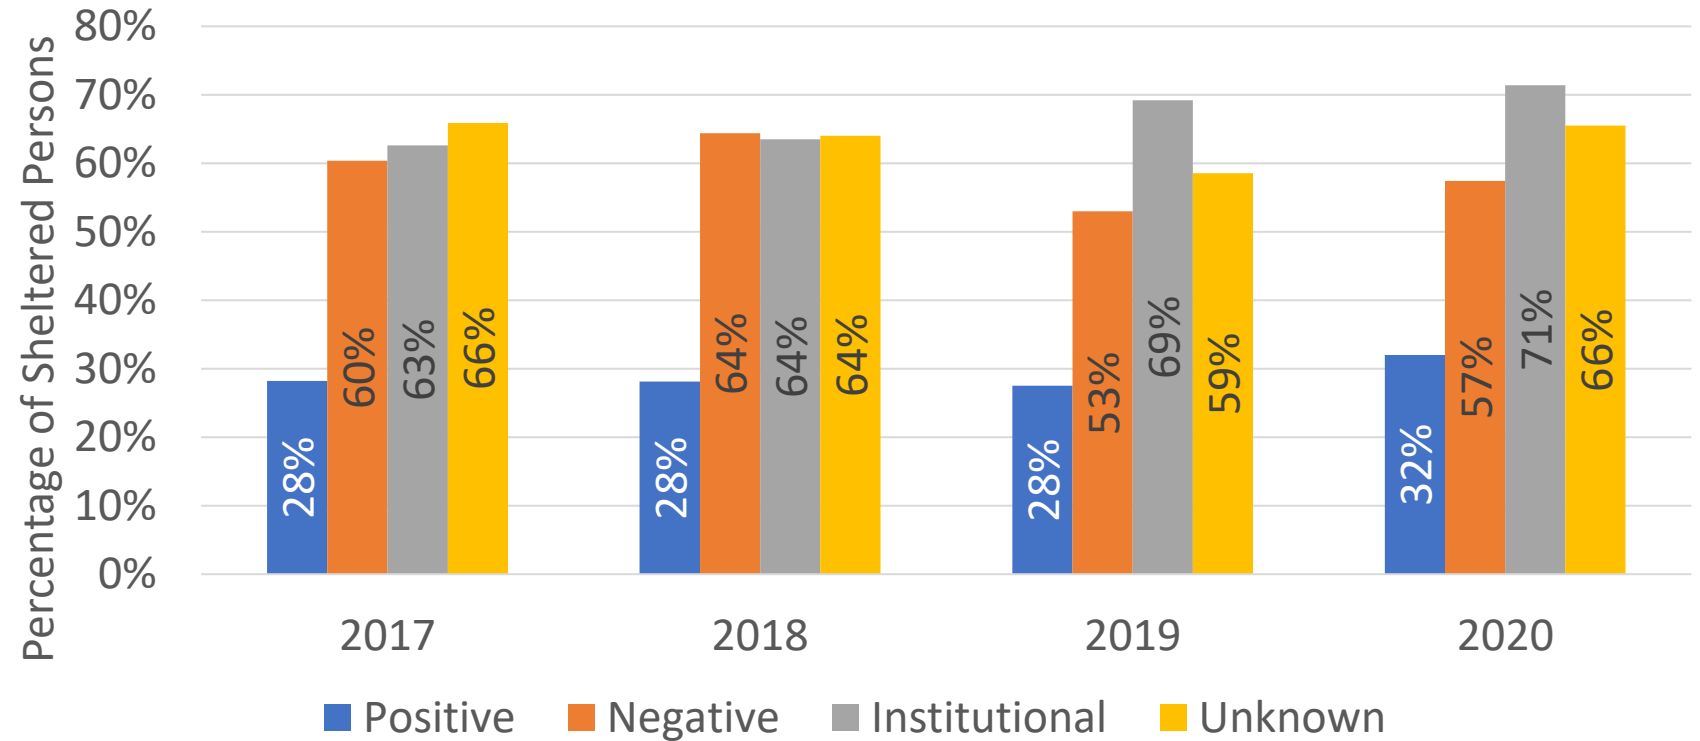

*Residents with unknown exit destinations have been excluded from this analysis.

Exit Destinations by Length of Enrollment

A relationship appears to exist between the length of time a resident stays in shelter and their eventual exit destination

Residents who stayed in shelter longer tended to be more likely to exit to a positive destination

Percent of Residents Who Exited Within the First Month by Exit Destination

Exit Destinations by Length of Enrollment

Median Length of Stay In Shelter by Exit Destination

Residents exiting to positive destinations spent between 70-78 days engaged with shelter

Residents exiting to negative, institutional, and unknown destinations spent less than one month in shelter

Income

Seven out of ten adults (18+) did not report income at shelter entry

Among those reporting income, the average was

\$1,052.77

Not enough monthly income to sustain stable housing

Income

County	2020 Fair Market Rent	% of Average Income Towards Rent
Greenville	\$740	70%
Spartanburg	\$679	65%

Last Permanently Housed in South Carolina

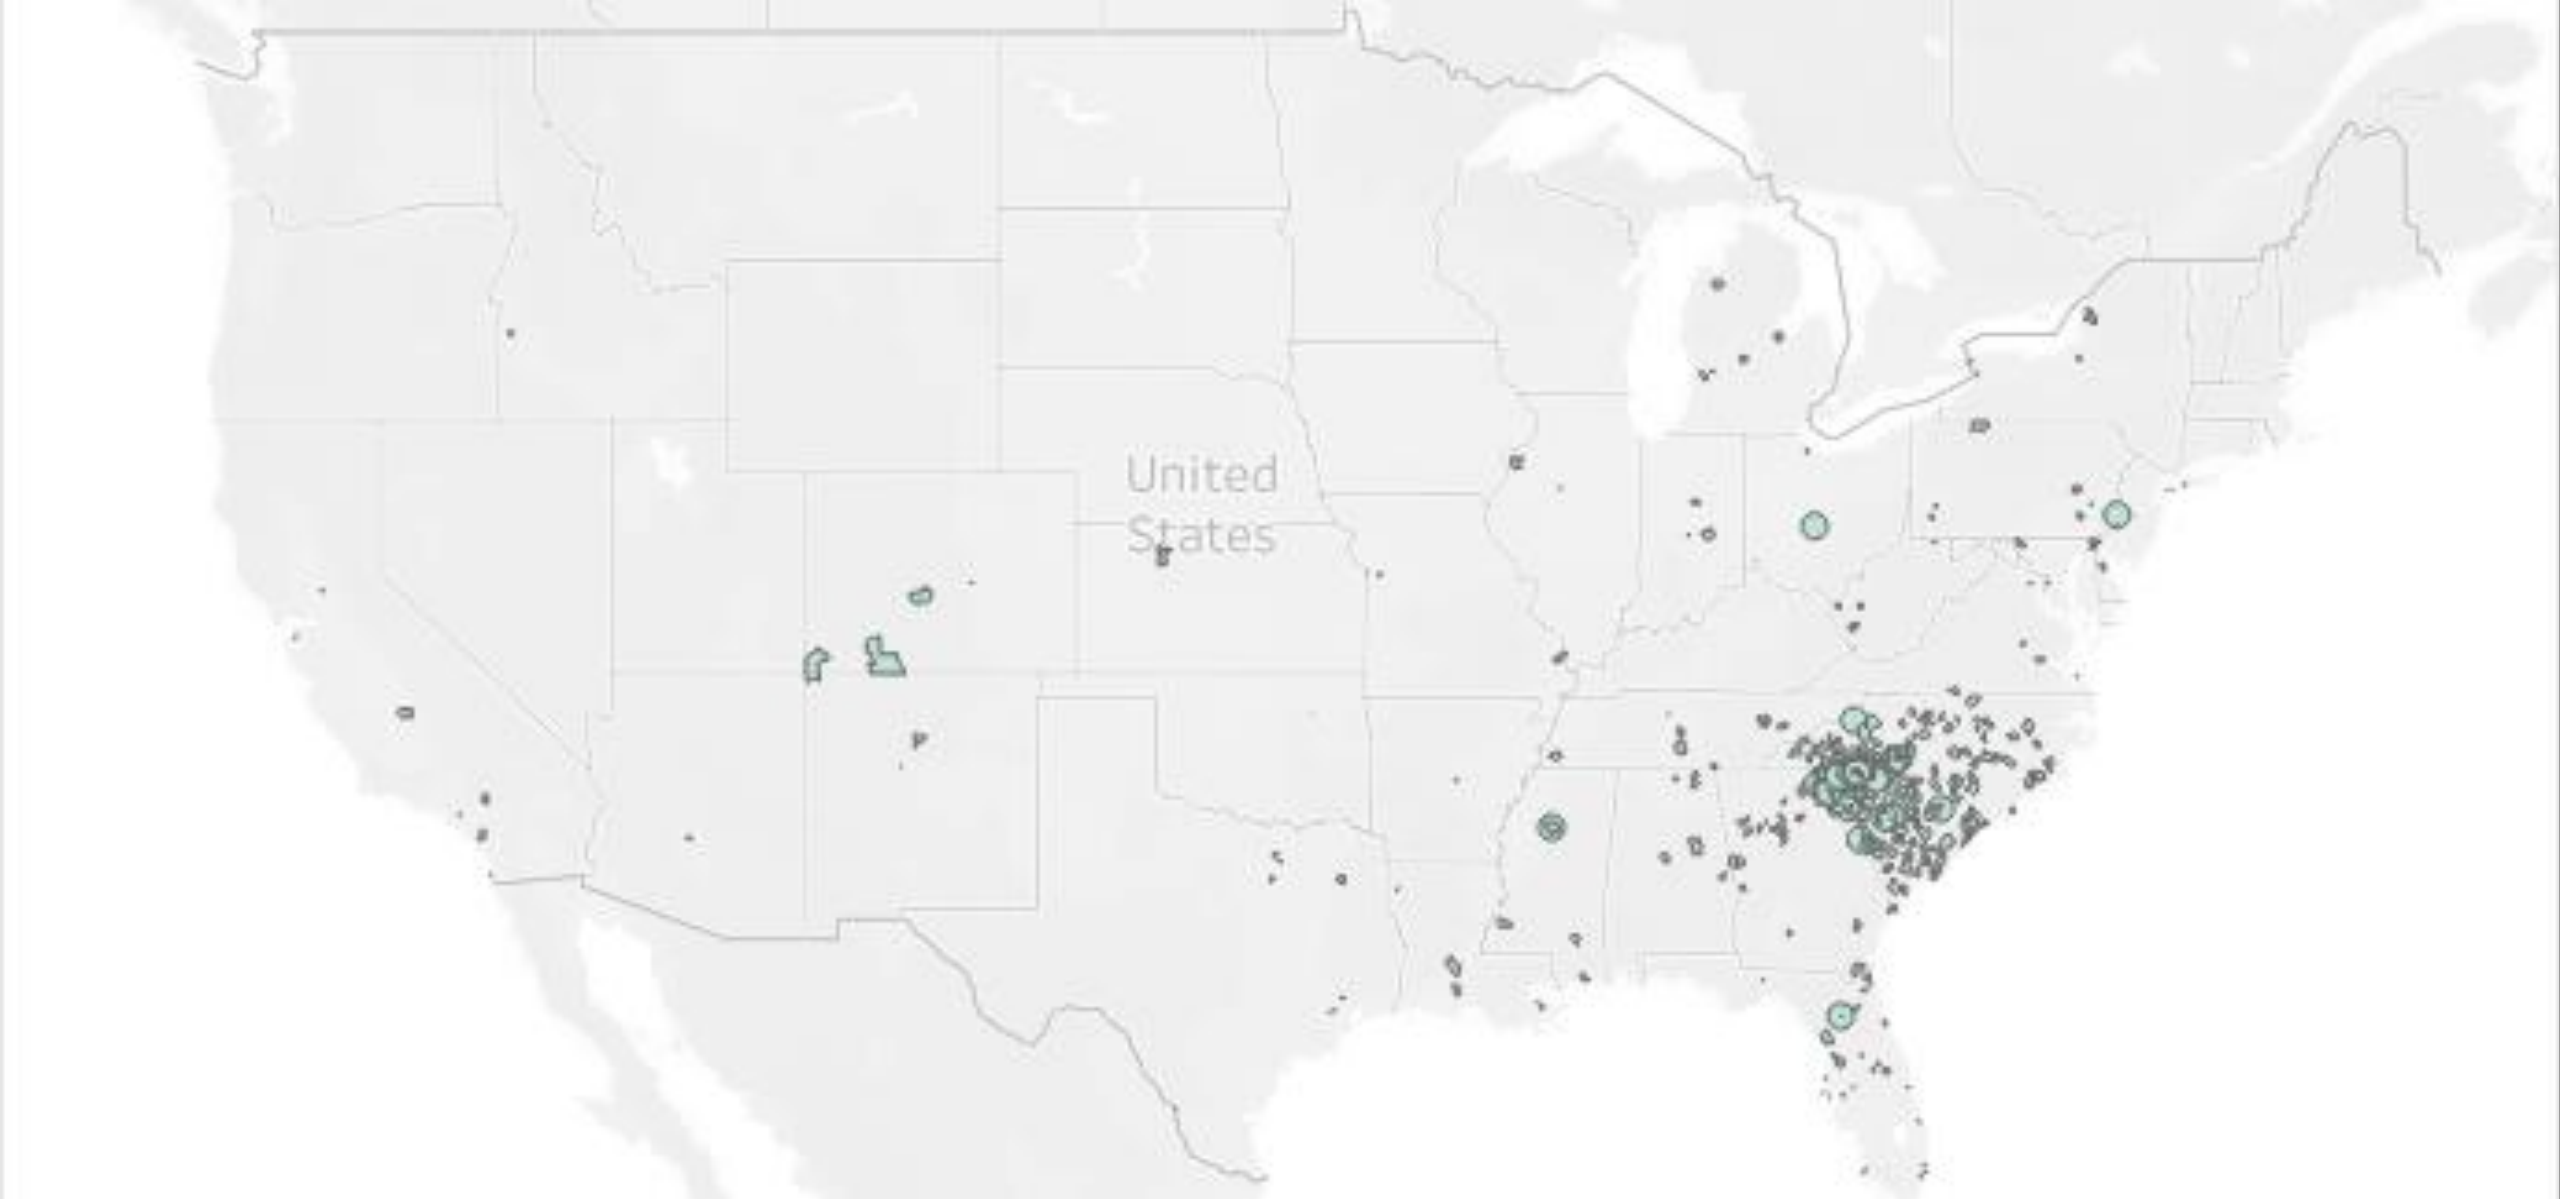

Last Permanently Housed in the Upstate

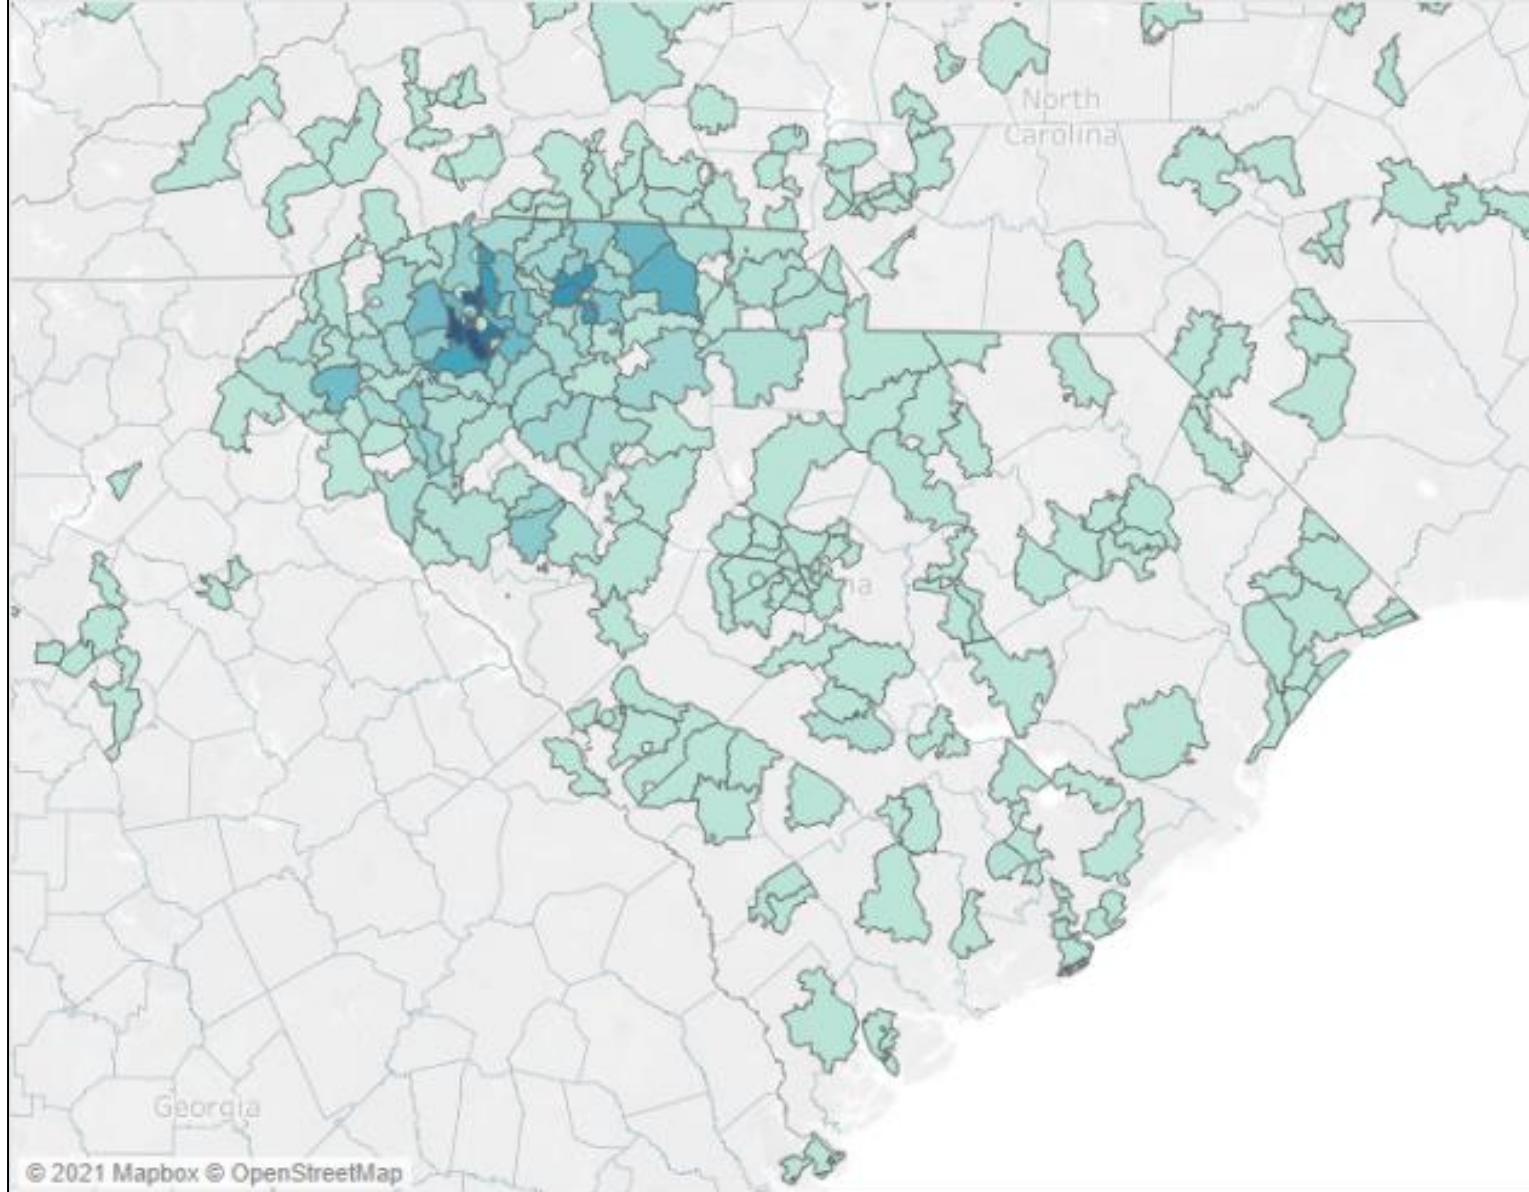

Last Permanent Address:

By a large margin, persons receiving shelter services were last permanently housed not only in South Carolina, but the Upstate

Map of Last Permanent Address (Zip Code) - 2020

Map of Last Permanent Address (Zip Code) - 2020

**SHELTERED HOMELESSNESS
IN THE UPSTATE –
KEY FINDINGS**

SHELTERED HOMELESSNESS KEY FINDINGS

- Around 3,000 persons experienced sheltered homelessness in the Upstate in 2017, 2018, 2019, and 2020
- While a decrease from 2019 to 2020 is accounted for by a variety of COVID-related reasons, 2,941 persons is still a large number and more representative of shelter use than other data source
- In each of the four years, 2/3^{rds} were served in Greenville County, with the second highest percentage being served in Spartanburg County

FINDINGS CONTINUED

- Demographically, the majority of residents were male and trending older
- Racially, the majority identify as White, followed closely by Black/African Americans (who are vastly over-represented in the homeless population compared to the general population)
- The length a client remains engaged with shelter appears related to exit destination; across all four years, persons exiting to positive destinations tended to stay longer in shelter than those exiting to homelessness, institutions, or unknown destinations
- Unknown exit destinations remain prevalent, but among those whose exit destination is known, nearly 8 out of 10 exited shelter to a positive destination

FINDINGS CONCLUDED

- Financial resources for residents continue to be limited; in 2020, only 30% reported any income at shelter entry with the average monthly income being \$1,053 --- an amount that would severely rent-burden even those who are reporting income
- In every year, 85-88% of persons receiving services were last permanently housed in South Carolina; >75% were last housed in the Upstate
- Homelessness is a home-grown problem requiring local solutions:
 - **Growing the inventory of very low-income housing that is near key services (transportation, employment, healthcare, support networks)**
 - Increasing housing-focused case management
 - Preventing the onset of homelessness among at-risk populations

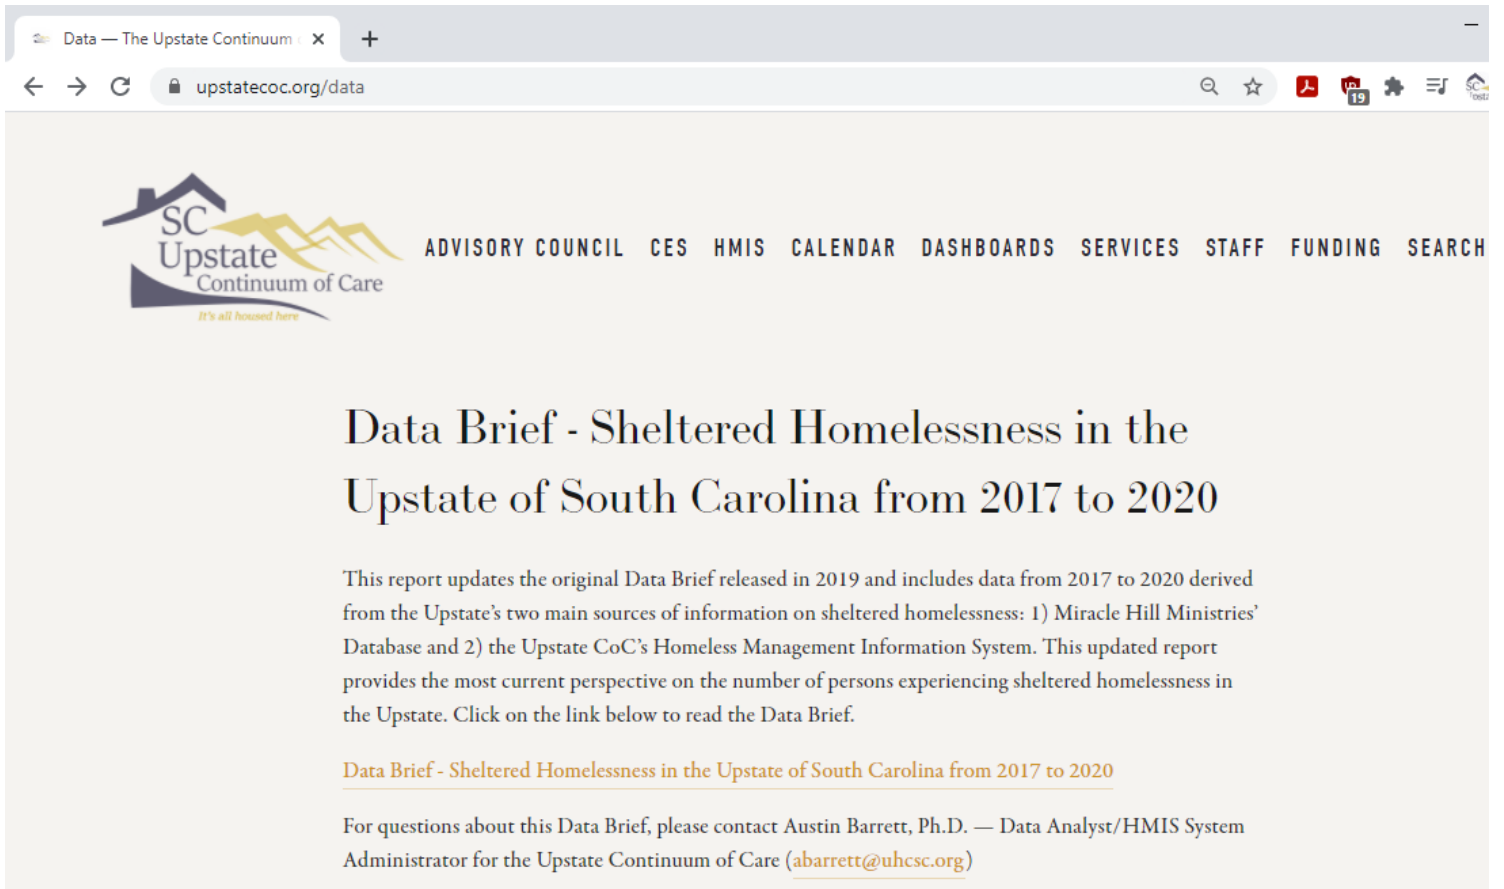

Question & Answer

will be posted to:

[UpstateCoC.org/data](https://upstatecoc.org/data)

The screenshot shows a web browser window with the address bar displaying "upstatecoc.org/data". The page features the Upstate Continuum of Care logo on the left, which includes a stylized house and mountains with the text "SC Upstate Continuum of Care" and the tagline "It's all housed here". To the right of the logo is a navigation menu with links for "ADVISORY COUNCIL", "CES", "HMIS", "CALENDAR", "DASHBOARDS", "SERVICES", "STAFF", "FUNDING", and "SEARCH". The main content area displays the title "Data Brief - Sheltered Homelessness in the Upstate of South Carolina from 2017 to 2020". Below the title is a paragraph of text: "This report updates the original Data Brief released in 2019 and includes data from 2017 to 2020 derived from the Upstate's two main sources of information on sheltered homelessness: 1) Miracle Hill Ministries' Database and 2) the Upstate CoC's Homeless Management Information System. This updated report provides the most current perspective on the number of persons experiencing sheltered homelessness in the Upstate. Click on the link below to read the Data Brief." Below this text is a link: "[Data Brief - Sheltered Homelessness in the Upstate of South Carolina from 2017 to 2020](#)". At the bottom, there is contact information: "For questions about this Data Brief, please contact Austin Barrett, Ph.D. — Data Analyst/HMIS System Administrator for the Upstate Continuum of Care (abarrett@uhcsc.org)".
